GIT and Intelij Assignment

1. What is the use of the git add command?

Ans. It is used to add file to the staging area.

2. Write the command to create a branch "feature-group".

Ans. "git branch feature-group"

3. What is a pull request? Write the steps involved in creating a pull request.

Ans. PR is made to acknowledge other team member that you have pushed changes to the branch and want them to review and get merge to the main branch.

Steps: New pull request -> select your branch, comment -> click Create pull request.

4. How do you add collaborators?

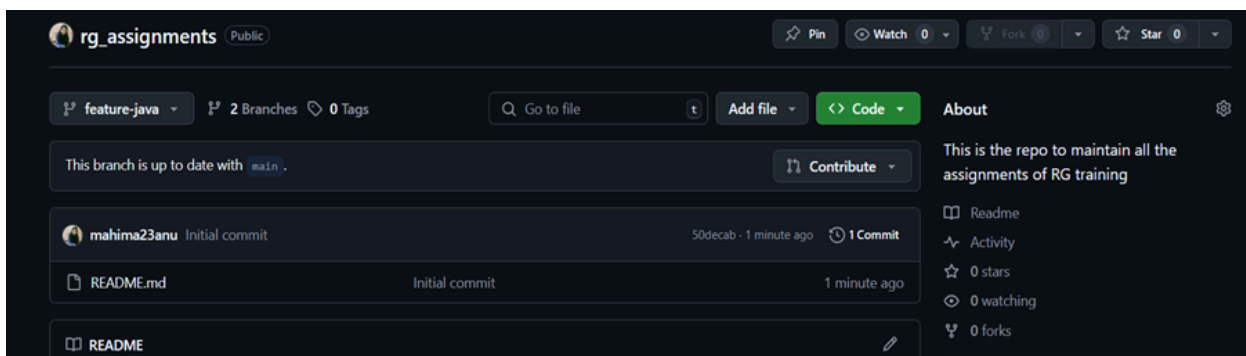

Ans. Settings -> Collaborators and teams -> Add people

5. What is the command used to commit our changes in github repo?

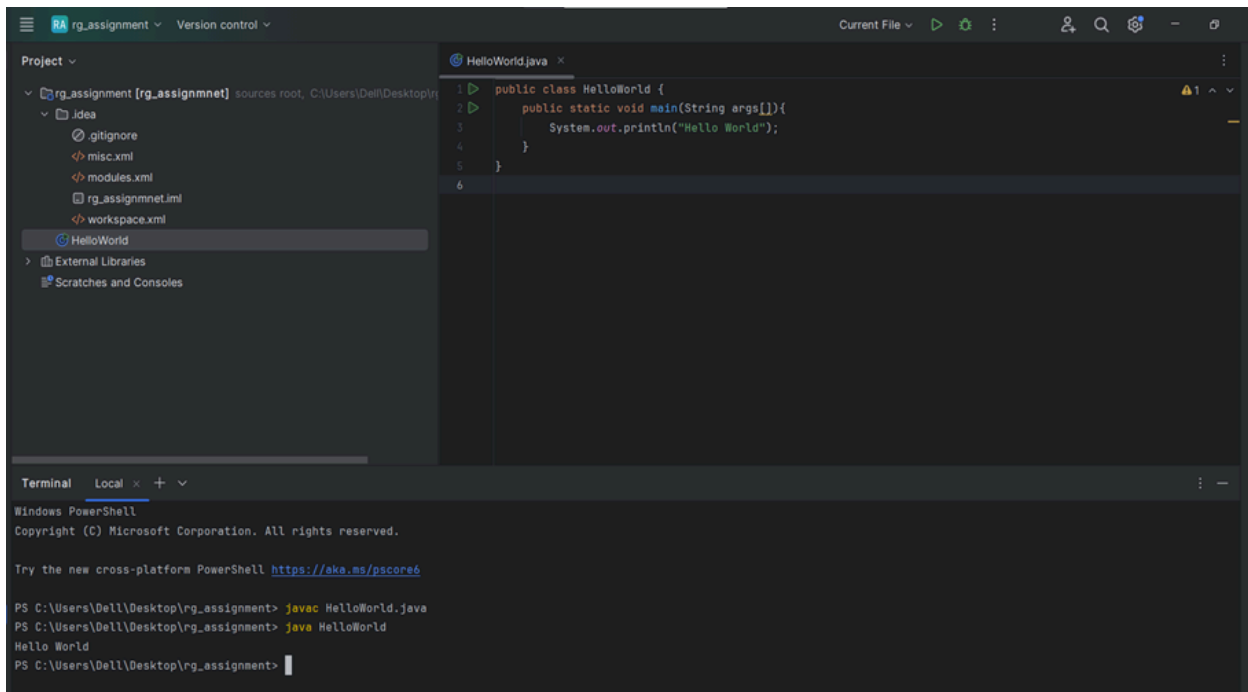

Ans. "git commit -m "Comment"

6. Create a github account and repository to save all your assignment tasks. Example repository name: rg-assignments

7. Create a branch called feature-java (you can use it later to push all your java related tasks to this branch)

8. Install IntelliJ IDE. Create a simple java project displaying “Hello World!!”and share the screenshot.

9. In IntelliJ IDE, explore the shortcut keys for the following
- To run the project : Shift + F10
 - To select a line : Ctrl + W
 - To comment/uncomment a line : Ctrl + /
 - To delete a line : Ctrl + Y
